Designer
Beadcrete

A simply unique architectural pool finish that creates magnificent light refraction in the water – spectacular by day – sensational at night with the pool lights on.

How much nicer to have something special that is tailored for you.

Choose from an array of rich reflective colours that so magically complement your concrete pool design, your home and lifestyle surroundings.

Unlike ordinary standard exposed aggregate concrete pool finishes, Designer Beadcrete, patented technology has extraordinary ingredients – small “retro-reflective” clear bead spheres combined with selected coloured quartz that mirror light under the surface of the pool’s water and create a vibrant sparkling finish of astounding aesthetic appeal. Product quality and consistency is assured through pre-blended packaging and factory manufacture. Because Designer Beadcrete is the very latest functional development in polymer modified cement/aggregate technology, this results in improved durability, colorfast performance and a slip-resistant, smooth textured concrete pool finish that is truly user-friendly.

Designer Beadcrete, is the ultimate decorative finish when you build, renovate or remodel your concrete pool.

Designer Beadcrete, has something special to offer that other reinforced concrete pool finishes don’t – a combination of versatility, originality and natural durability to complement any design theme.

Whether you wish to change your current pool shell coating or plan an entire renovation upgrade inclusive of water features or want your new concrete pool to reflect a unique colour finish of lasting beauty then Designer Beadcrete, is your design solution with ease of maintenance. There are no special treatments required to preserve aesthetic appearance except to use a normal automatic suction cleaner and simply keep the pool water sanitised and chemically balancedit is that easy!

www.designerconcrete.com.au OR naichumosaics@yahoo.co.uk

Designer Pool Coatings is applied by hand under varying weather & site conditions. Pool colours will change depending on site conditions, surrounding colours, cloud cover & depth of water. Due to these factors and limitations in the printing process, the colours on this chart should be used as a guide only.

BC6000 Coating

NAICHU Fixing Glass Mosaics

Step 1: Apply a suitable thickness of adhesive to the surface and press the mosaic sheets into position using a rubber trowel or similar

Step 2: After the adhesive has fully cured, wet thoroughly the paper with a sponge and wait for the water to seep across. Then peel the tear off, and rinse to remove and leftover adhesive. If using the new vision film, all that needs to be done is to peel off the film. No water is required.

Step 3: Fill the joints between the tiles with a slurry grout.

Step 4: Clean the mosaic with a wet sponge and wipe clean with a dry rag.

If the tile is mesh back, fix the mesh to the surface with the glue and press the mosaic sheets into position using a rubber trowel or similar. After the adhesive is fully cured, grout the edges. Wash and clean the tiles.

NAICHU Mosaic is multipurpose
